

QRP Transceivers and PAs from Accessible Parts

Book in Russian “**QRP Transceivers and PAs from Accessible Parts** “ (*pdf), 28 pages. The book was published by me (on my own expenses) in 1991, in Belgorod, Russia. I had printed 2000 samples of the book. Of course, it was not best paper used for the book as well as not good quality of printing. The book describes kits which my own company (“Vibrissa”) produced at the times. Naturally, the book was the manual for the kits. Were produced 400 kits of TST (Tube- Semi- conductor- Transceiver) near 50 of them were assembled by me for customers, 200 kits SQT (Semi- conductor- Quartz- Transceiver), near 30 of them were assembled by me for customers, 200 kits of PA, near 60 were of them were assembled by me for customers.

Well, 1991- 1995 years were very interesting in my life in Russia. For now I have only 5 samples of the book, other ones were sold. I have no boards for the transceivers and PAs.

But you, if you want, can do the equipment again. The book contains copies of the PC- boards, manuals for tuning. The equipment is really the equipment that works great.
