

Underground and Ground Antennas

*Underground and Ground Antennas.
Georgiy A. Lavrov
Aleksey S. Knyazev
Publishing House: Sovetskoe Radio
Moscow, 1965*

Book "Underground and Ground Antennas" was published in Moscow in 1965 year. The book was published in small numbers of printed copies- 6500 e.a. It is a very small for USSR where the textbook was published in 100, 000 and more copies. However it was not usual Antenna textbook. It was Antenna textbook on to classified subject- Underground and Ground Antennas. The antennas were used in military application not for civil using.

Underground and Ground Antennas were used at underground Military Communication Centres that should be survived after nuclear strike. As well later Underground and Ground Antennas were used in secret Soviet System "Perimeter." The system allowed make last nuclear strike ever personnel responsible for the missile were dead.

The system (Perimeter) was some time not operable in full however then was restored. Some Underground and Ground Antennas were described at Antentop pages. Just go to http://www.antentop.org/book/c_underground.htm

There are you find some information on underground antennas. Though the book did not open existing underground antennas installed in the USSR the theoretical sides of the underground antennas were described in full. As I know it was in the USSR sole book on Underground and Ground Antennas that was in open access. No one book on the theme was published for open access after the book.

The book not only gives wide theoretical knowledge on the antenna thematic. The book has astonished list of the past Antenna Books and articles that could be accessible from usual library.

The book was published in Russian. I cannot find the English translation of the book.

Underground and Ground Antennas
